

I fully support XM radio in providing safety information in regards to weather and traffic. I pay for this service because over the air radio has fallen short. I think that the consumer should have the voice here and if demand (subscribers) is sufficient then this should be allowed. Do not make XM lower to the sub-standards of the entrenched and bloated momouth that is conventional radio. This is just a ploy to further entrench their monopoly *(clear channel) on the public air waves. I would like to vote with my wallet on this. Allow XM to continue their excellent job.

thanks - mario
